

New Products

#4300 NEMO 8C / #4200 NEMO 4C

The new flashlights NEMO 8C and 4C developed by Peli Products for diving applications. Photo Bahia Blue NEMO.

NEMO 8C & NEMO 4C

are the new Peli flashlights available in Europe.

These two flashlights have recently arrived from US where they have been very successful with diving users. They have a complete different look from classical Peli flashlights with a more fashionable style. They are made of ABS polymer body with black thermoplastic over molded accents, polycarbonate lens and an exterior 'leak proof' electronic switch. It also includes a spare lamp.

They are available in four colours: Metallic Pewter Grey, Goldenrod Yellow, Bahia Blue and Black Onyx.

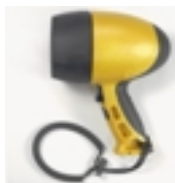

The most interesting feature of these new flashlights is the adaptability to use it with only one hand. Its combination of ABS body with the thermoplastic accents makes this flashlight extremely pleasant to use and handle. Also they come with a lanyard that is covered by a Rubber sleeve to protect the users wrist. This time Peli Products has designed a complete different switch from the classic Peli rotary on/off switch. It has been designed to be completely waterproof (no holes are put in the body) and it offers more durability when switching on/off continually. Besides it contains a switch-block in order to avoid involuntary switch on.

NEMO 8C is the most powerful flashlight from Peli Products, with a Xenon lamp that produces 100.000 candle power, 276.5 lumen value and 13.8 Watts, which provides an extremely powerful beam of light that is ideal for use under water. It has a battery burn time of 3.5 hours and a lamp life of 30 hours.

NEMO 4C is a fashionable and handy flashlight identical to the 8C only smaller. It provides a powerful light of 60.000 candle power, 112 lumen and 6.9 Watt, which is designed to use under water or as a general flashlight due to its high-technology features. It has a battery burn time of 3.5 hours and a lamp life of 30 hours.

NEMO 8C and NEMO 4C are both submersible to 150 meters, available in the same colours and have the same design. The differences between them is the size, the power of their beam of light and the fact of being 8C and 4C. These are two new products from Peli as always covered under the Unconditional Guarantee forever.
